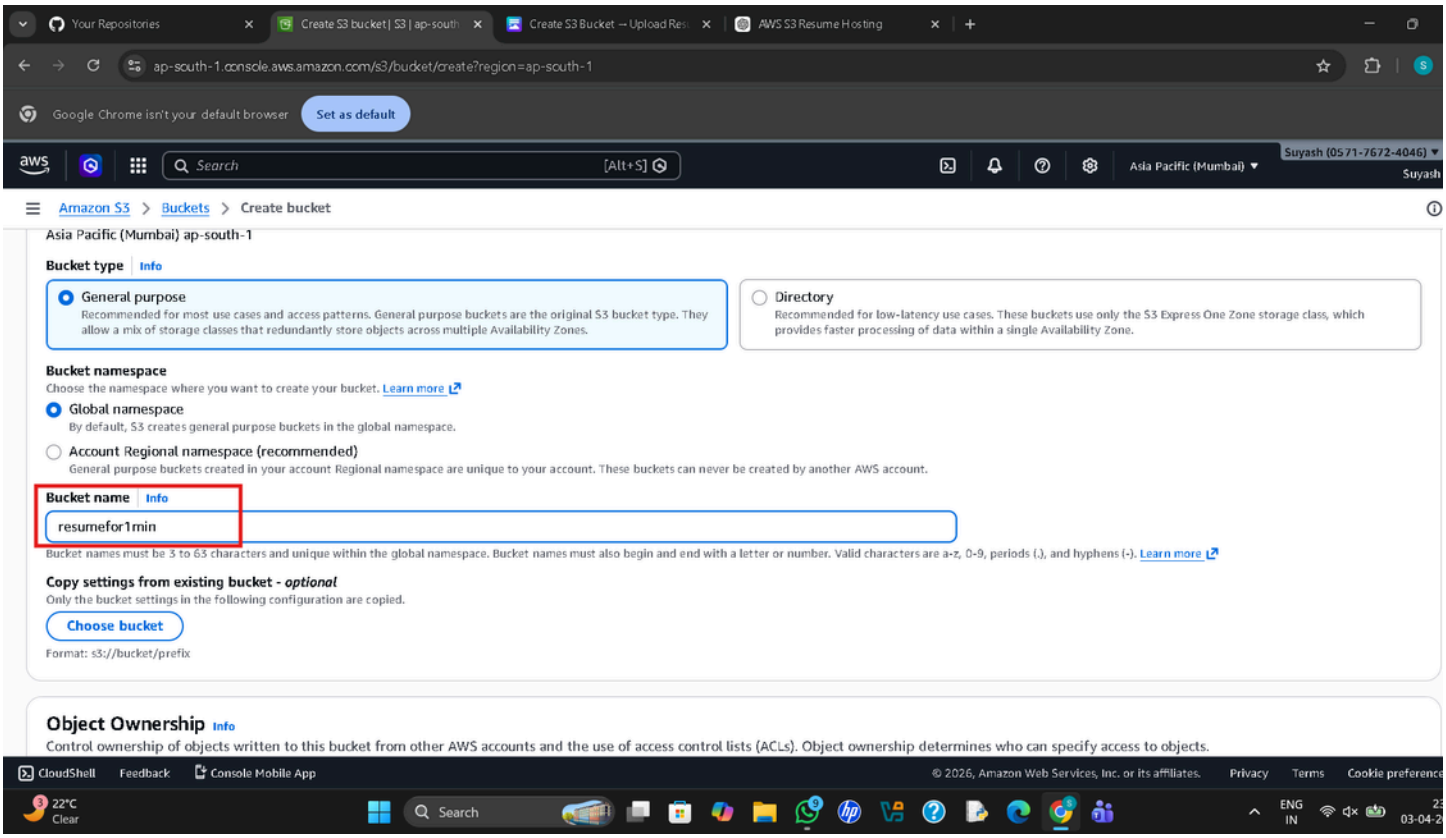
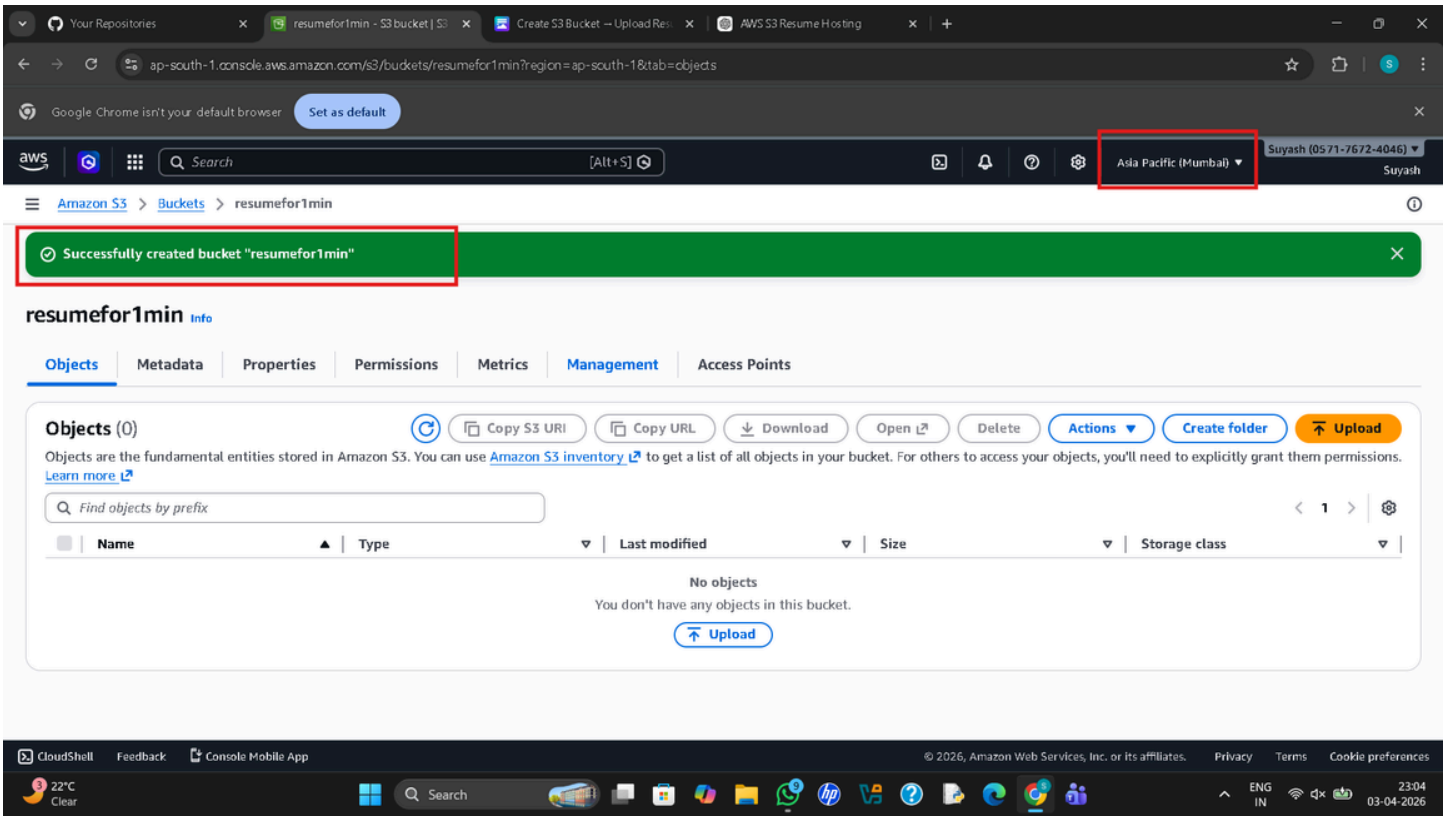
Create S3 Bucket → Upload Resume → Share via Pre-Signed URL (1 min)

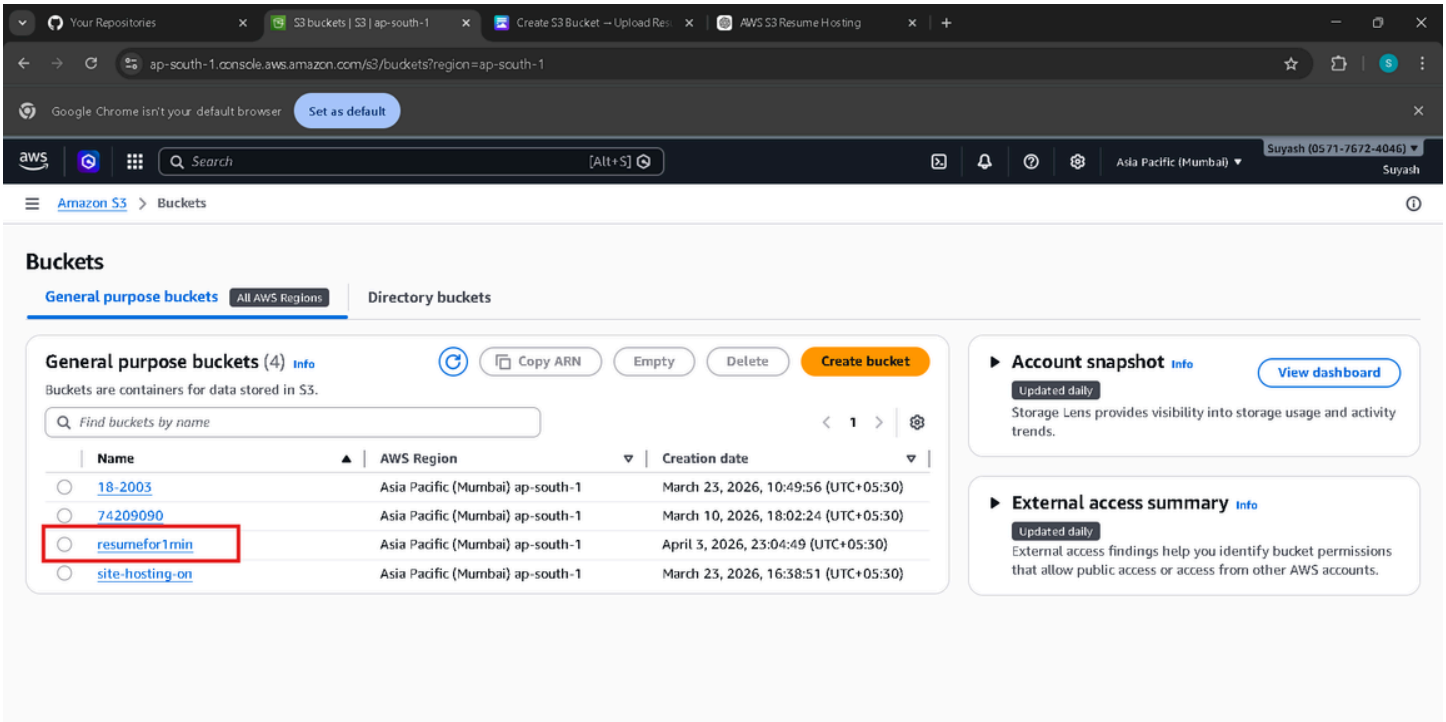
1. Go to **Amazon Web Services Console**
2. Search → **S3**
3. Click **Create bucket**



Fill details:

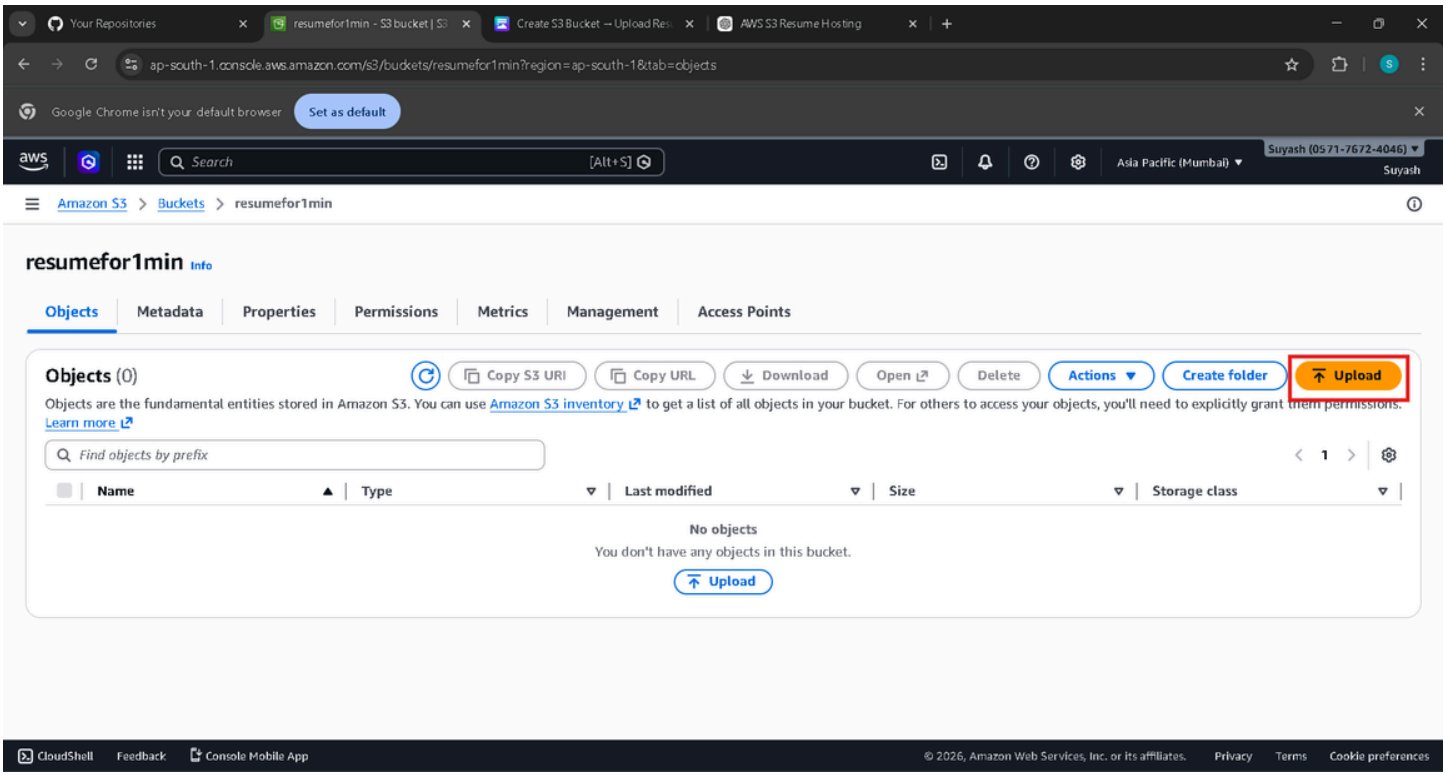
- Bucket name: resumefor1min (must be unique)
- Region: Choose (e.g., Mumbai)
- Keep default settings



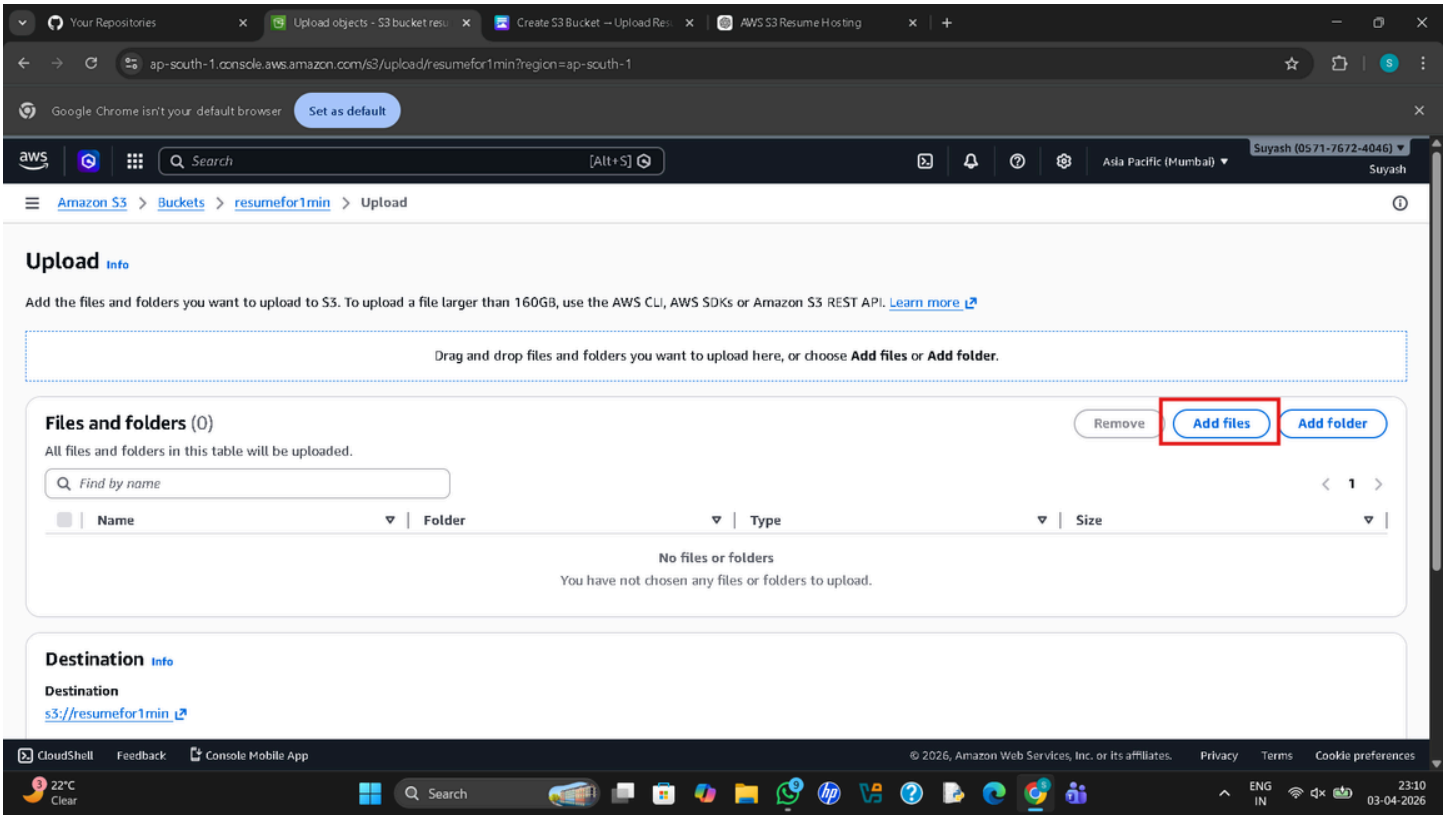


Open your bucket

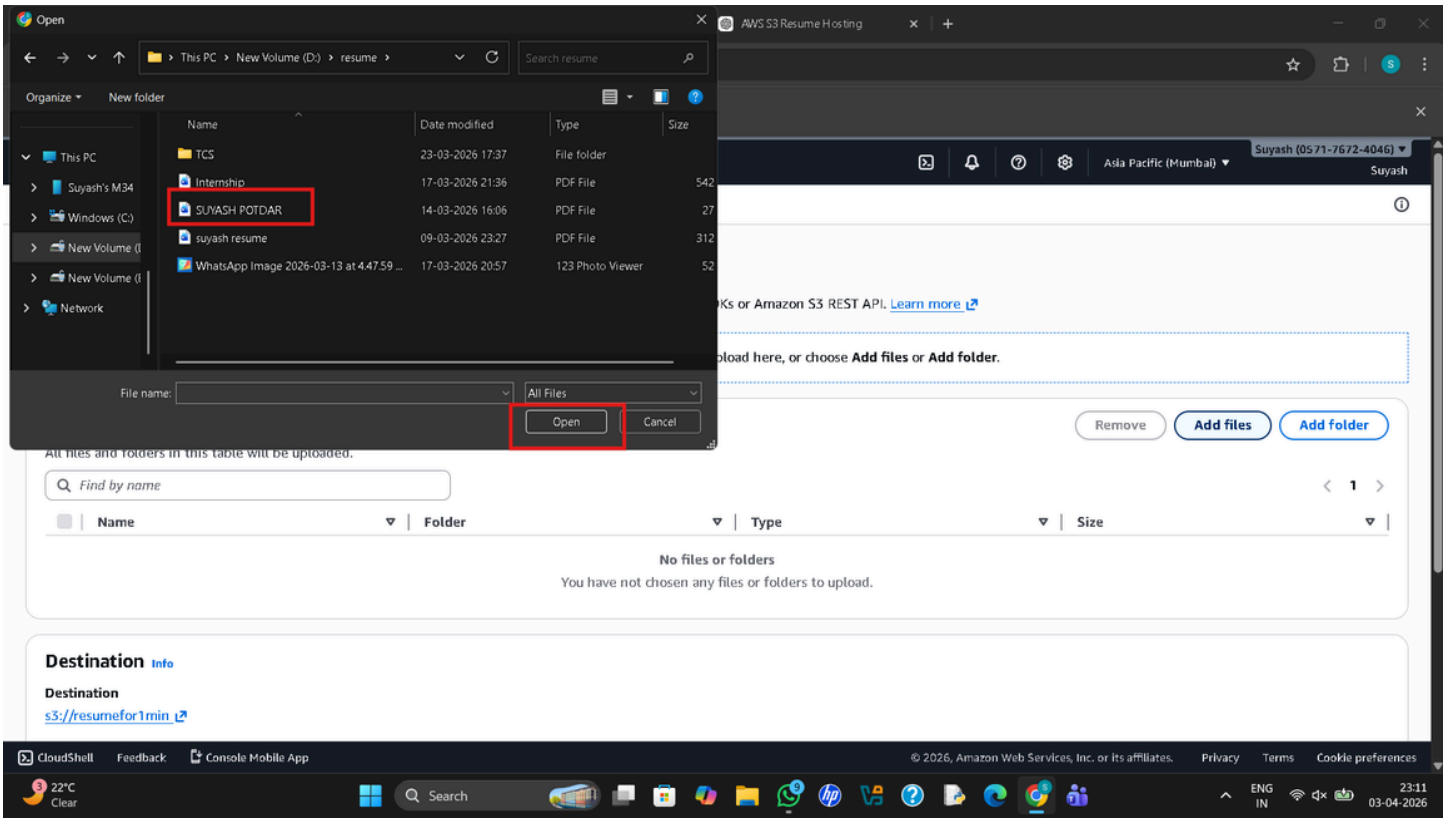
Click **Upload**



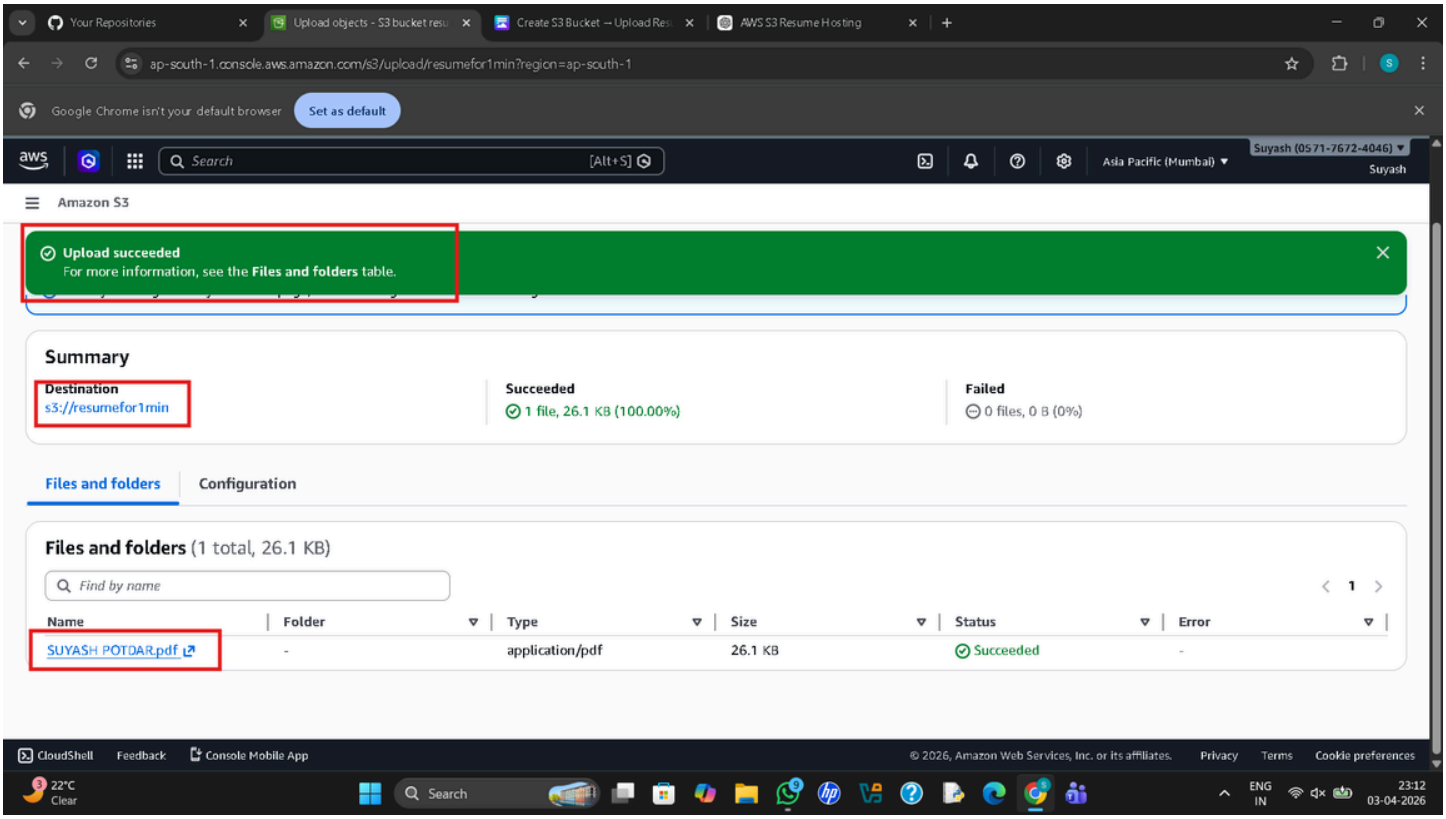
Click **Add files**



Select your resume (PDF)

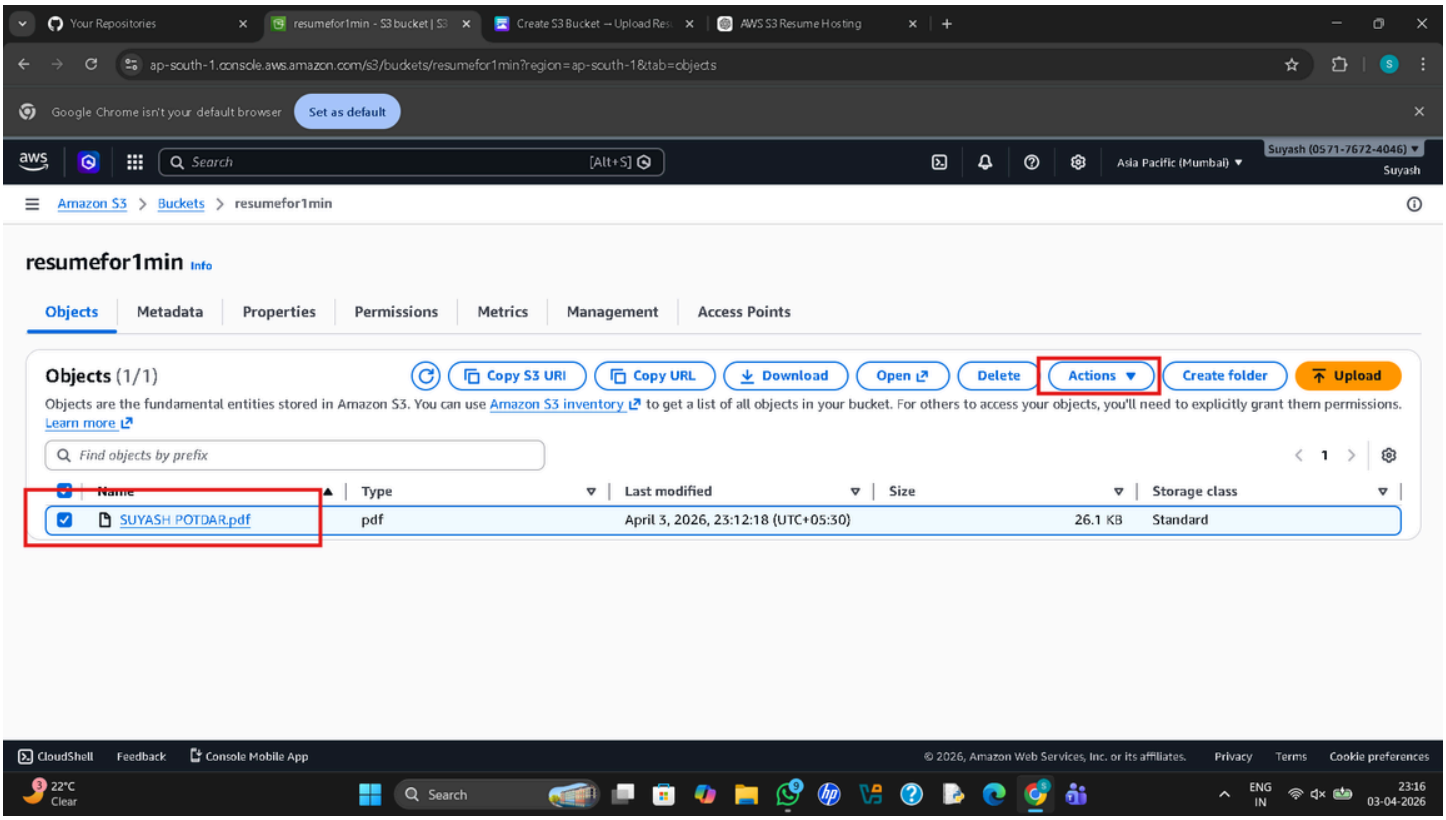


Click **Upload**

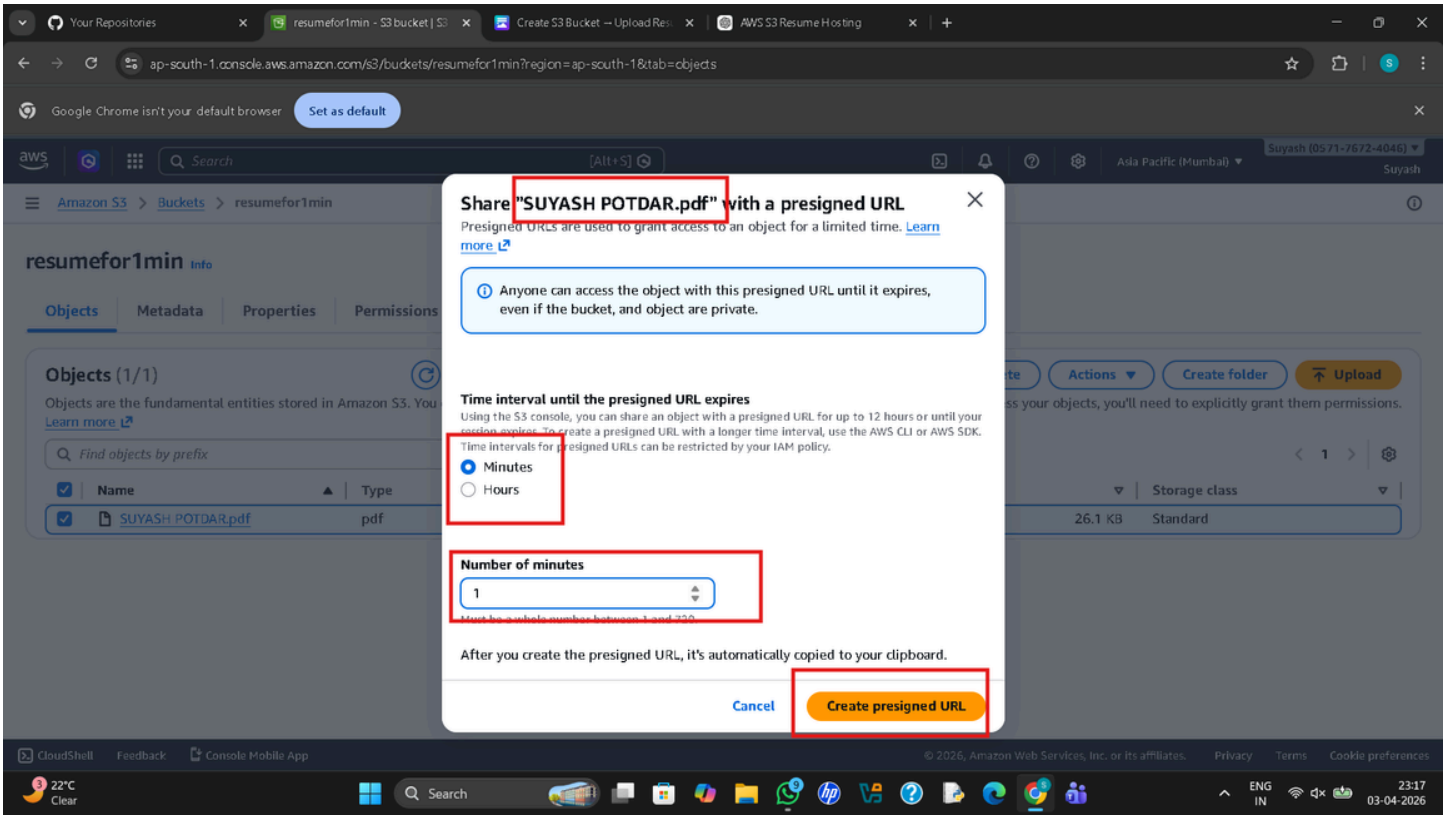


STEP 3:Select your resume File

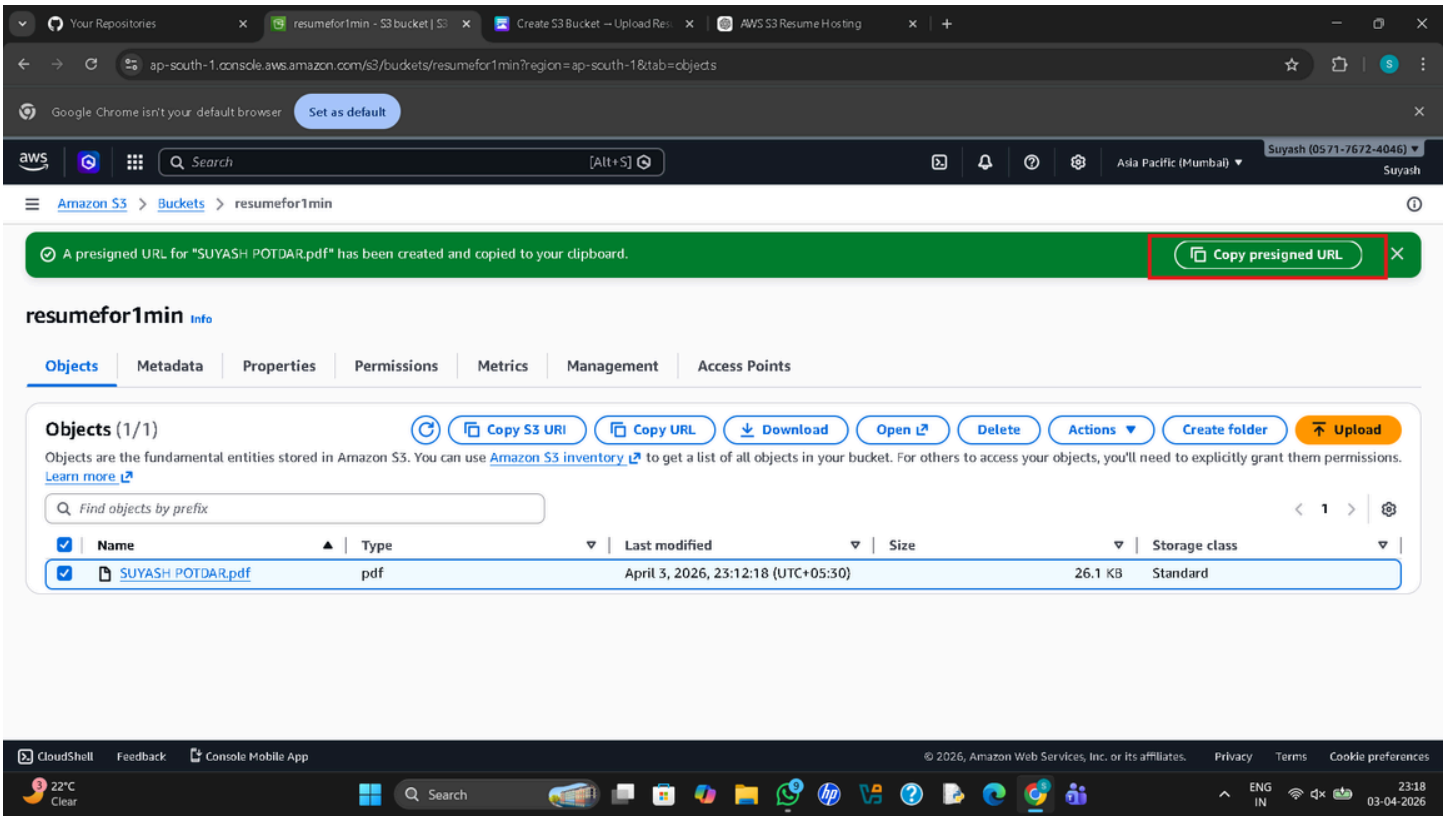
go in action section



Click on share with a presigned URL

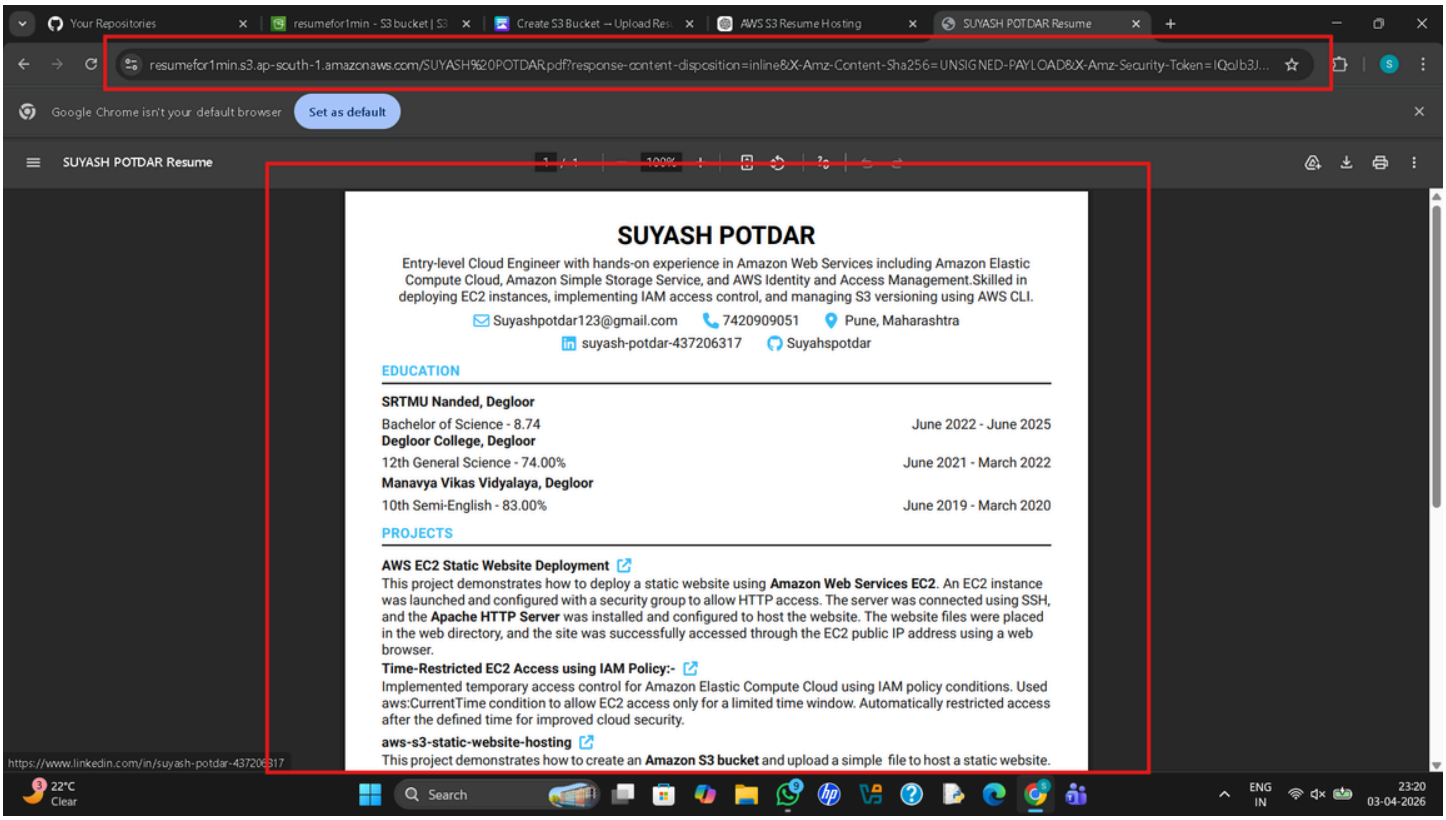


Then u get a URL link



copy it and paste it on brower

You will se the resume for 1 min



After 1 min you cannot have axis on it .

In this task, an Amazon S3 bucket is created to store files securely in the cloud. A resume file is uploaded to the bucket, making it available for controlled access. To share the resume temporarily, a pre-signed URL is generated with a validity of 1 minute. This URL allows anyone

with the link to access the file without making it public. After the expiration time, the link automatically becomes invalid, ensuring security and controlled sharing of the document.
